BIRDS OF PARADISE

In this world there are many types of birds that are very unique, both from their names and from the characteristics they have. One of the unique bird types that you should know is the bird of paradise.

The bird of paradise is a type of bird grouped in the Paradisaedie family. This bird is only found in eastern Indonesia and Australia is often found on the island of Papua because that is the habitat of this bird. This bird of paradise is very famous for the beauty of its feathers and even this bird is given the nickname bird of heaven (heaven).

On the body of the bird of paradise there are bright feathers and attract attention such as yellow, green, red and blue. This bird of paradise consists of 13 genera which have about 43 species, it is estimated that around 30 species of paradise can be found in Indonesia. And 28 of them live in Papua. And this bird has many kinds of it including small yellow paradise, bird of paradise raggiana, bird of paradise goldi and many others. This paradise also has various sizes, ranging in size from 15 cm and some even measuring 110 cm depending on the species that exist.
